

Evidence Bundle 1 — Auditd Configuration and Events

1. Evidence that auditd is running.

```
(moyosoreobasa@kali)-[~]
$ sudo systemctl status auditd

5. Audit Record Interpretation

The passwd_changes audit record shows activity involving the sensitive /etc/passwd file at approximately 19:15:01 on 1 October 2026. The event was associated with UID 0 (root), while the audit user ID (auid) was unset (4294967295). The audit record shows a successful system level action involving /etc/passwd, demonstrating that the configured audit rule is capturing activity against the monitored account file.

This event is relevant to security governance because /etc/passwd contains important account information and activity involving it should be traceable. However, the record alone does not establish that a particular human user intentionally modified the file. The unset auid means additional correlation with

process and system logs may be required to establish accountability. The evidence therefore demonstrates that the monitoring control is operating and producing traceable security evidence, while also highlighting the importance of sufficient attribution when reviewing privileged activity.
